REFAUTEC
Automotive Parts & Lubricants

Company profile

Automotive sourcing for the Israeli market

REFAUTEC focuses on automotive spare-parts imports in Israel and is developing its lubricant sourcing program. We welcome discussions with manufacturers and export suppliers interested in supplying the Israeli market.

Automotive spare parts

Our sourcing focus includes parts for Toyota applications and spark plugs for Toyota, Hyundai and Kia vehicles. Current categories also include cooling components, engine mounts and suspension parts. Product references and vehicle compatibility are central to each enquiry.

Lubricant sourcing

We are seeking suppliers of branded engine oils and evaluating manufacturers for a private-label range. Discussions cover formulations, retail packaging, documented performance specifications, applicable product approvals and the ability to export to Israel.

Working with suppliers

We value clear product identification, traceable origin and transparent commercial terms. Initial discussions establish product suitability and pricing before quantities and purchasing terms are agreed.

Your initial quotation

Please include product references and specifications, pack sizes, minimum order quantities, price tiers, currency and payment terms. State availability, lead time, Incoterms with the named location, country of origin and export availability for Israel.

For lubricants, please provide available technical and safety data sheets and distinguish formal approvals from performance claims.
